HD 2206.2

HD 2206.2

BENCH-TOP CONDUCTIVITY METER

The HD2206.2 is a bench top instrument for electrochemical measures: **conductivity** and **temperature**. It is fitted with a large backlit LCD display.

The HD2206.2 measures **conductivity**, **resistivity** in liquids, **total dissolved solids** (TDS), and **salinity** with combined 4-ring and 2-ring conductivity/temperature probes. The conductivity probes can have a direct input or with SICRAM module. The inputs are separate.

The instrument is fitted with input for the measurement of **temperature** with Pt100 or Pt1000 immersion, penetration or contact probes. The temperature probes are equipped with an automatic recognition module and factory calibration data are stored inside.

- The conductivity probe calibration can be performed automatically with automatically detected conductivity calibration solutions: 147 μ S/cm, 1413 μ S/cm, 12880 μ S/cm or 111800 μ S/cm or manually with calibration solutions having different values.
- Conductivity and temperature probes fitted with SICRAM module can store factory and calibration data inside.

The instrument HD2206.2 is a **datalogger**, it can memorize up to 2,000 samples of data of conductivity (or resistivity or TDS or salinity) and temperature.

The data can be transferred from the instrument connected to a PC via the RS232C and USB 2.0 serial ports. The storing parameters can be configured using the menu.

The RS232C serial port can be used to transfer the acquired measurements to a 24 column portable printer in real time (HD40.1 or HD40.2). The instruments equipped with **HD22BT** (Bluetooth) option can transfer data without any connection to a PC or printer fitted with Bluetooth input or through Bluetooth/RS232C converter. The software DeltaLog11 allows instrument management and configuration, and data processing on PC.

The instruments have IP66 protection degree.
